INDEX

- 
- A futuristic cityscape at night with a flying car in the foreground. The car is sleek and dark, with bright blue lights glowing from its front and rear. The background features a city skyline with various buildings, including a large, dark, angular structure on the left and a multi-story building with a grid-like facade on the right. The sky is a deep purple and blue, with a soft glow from the city lights.

INTRO

ET COIN WEB3 is an audited and verified Web 3.0 project on the Binance Smart Chain (BSC) that will include the sale and purchase of galaxy lands, the first NFT Expo Planet in the crypto world where digital artists will offer their 3D art pieces, Play-to-Earn games, rewards for token holders, Swap & Staking options and a free mobile app for Android and iOS.

ET COIN WEB3 will also be the community token of one of the 80's greatest movie characters.

OUR HISTORY

Few film directors have taken us as far as Steven Spielberg. It is a great honor for us to pay cryptotribute to Spielberg's vision of a sublimated childhood as a vehicle of redemption from a grey existence imposed by the burdens and lies of adults.

The world of fairies is possible just by applauding and we applaud Steven Spielberg's courage and bold personality. His great soul is transparent in ET movie where we can feel a clean and hopeful look. Our friend eventually leaves, but despite the tears, a rainbow emerges from the spaceship's trail.

This first 3D NFT's art project unique of its kind will be the beautiful merge between some of the most talented artists and the upcoming Web 3.0 revolution.

With ET COIN we dream about bringing the light from space that we lack as a species to create a better future.

GALAXY LANDS

The world is changing, time is speeding up and the metaverse is emerging as our future social and economic interactive environment.

The human being is evolving as well as technology, we cannot settle for a simple life without including this new reality. Nowadays you can buy lands in towns, cities, distant countries, or even in metaverses of other platforms. What would you say if you soon have the opportunity to own a piece of space land in our galaxy?

The ET COIN WEB 3 project is going to make it possible. After completing the mapping of the Milky Way and Andromeda, the user will be able to acquire land in these outer spaces. The ambition of the project is, in the near future, to expand to new galaxies.

This will be achieved through a mapping of free access images from NASA and the European Space Agency (ESA) transforming them into virtual reality of our metaverse, where the plots can be entered and detailed, we will use VR glasses or helmets to be able to observe with a super 3D image effect. Each part of space, planets, asteroids, meteorites and astronomical places of interest will have different commercial values according to their size and order of importance. They will be replicated and positioned virtually precisely in shape, appearance and dimensions.

The medium of exchange of this metaverse will be the ET COIN WEB3 cryptocurrency. The connection to the platform will be made through a browser extension or plugin such as MetaMask in order to facilitate transactions. The option of a property form will be available to anyone who acquires land and wishes to nominate it.

The lands of our metaverse in the galaxy can be transferred as a gift to surprise friends, partners and family members, on any occasion. How would you feel when offering a legally certified and patented piece of the moon? All the galactic plots of the platform will be patented, through a regulatory entity, the owners will receive an audited digital certificate and a unique serial number that will prove ownership.

The lands can be resold, rented or exchanged for NFTs. Owner names may be listed in the ETCWEB3 metaverse or may be anonymous. Lands will increase in value based on crypto trends, project popularity, scale and network effect.

This development is complex. At ETCOIN we are working with a committed and determined team to carry out this project and make it accessible to everyone.

Furthermore, another ambitious future goal for the team is to include the participation of SpaceX and its founder Elon Musk in some sidereal way. We are convinced that he will be enchanted with the token because of his particular love for extraterrestrial life, irony and space. A form of intervention will be discussed with his team in due course. It would be of great relevance for our platform to have the large amount of information and the experiences they have about the space.

We are going to work tirelessly to turn this project into a tangible reality.

Come on board! We are waiting for you in our metaverse!

NFT EXPO PLANET

NFT Expo Planet is the first commercial digital gallery in the world with a fully immersive 3D interface.

This exclusive space gallery on the ET COIN WEB3 ecosystem seeks to open the doors for NFT 3D art creators to share their projects in our metaverse.

Holders will have access to games and activities for prizes in cryptocurrencies. Community is the most important thing here: every 15 days 2 community member NFT collections will be chosen and given a chance to exhibit and sell their pieces at the NFT Expo Planet.

The commissions of these sales will be distributed equally among the main holders.

SPACESHIP X GAME

We believe in a robust and inclusive world economy, where all participants have the possibility of access without distinction of race, gender, nationality or socioeconomic level.

Our games on the ET COIN WEB3 platform will be accessible for an amount of our cryptocurrency equivalent to 3.33 BUSD, a sum that will allow entry of all participants without economic exclusion as seen on other platforms.

The main game -Spaceship X- is a blockchain-based game in which players purchase lands and characters interact with each other in battles and negotiations. Players earn ET COIN tokens during gameplay and can trade them for other currencies on ET Swap.

In addition, there will be a rewarding scholarship program with a minimum investment. It is a game developed under Play-to-Earn principles.

ET SWAP

Security, control and options should be at the top of a crypto enthusiast's shopping list.

The swap option will allow users to exchange assets while maintaining full ownership of their cryptos.

ET COIN WEB3 will integrate fifteen (15) digital assets as trading pairs of the top fifty (50) with the largest market capitalisation.

We will continually add new cryptocurrencies according to the demand of our community.

We aspire to a streamlined experience that eliminates fragmentation. An increasing number of large companies now accept digital assets as a payment method, which means that cryptocurrencies are entering further on our daily lives. In order to achieve mass adoption, new users have to use platforms that offer full transparency when it comes to trading fees. ET COIN will offer extremely competitive rates as we are unanimously convinced that community adoption is what will take the project forward.

Considering that, we will offer a fixed exchange fee which means the user would know how many tokens will be received up front, in exchange for a slightly higher transaction fee. Alternatively, the user will be able to cut costs by using a floating rate and exchanging their digital assets at the current market price.

This intuitive service will be available through our website and will offer an easy and safe way to exchange cryptocurrencies.

STAKING & REWARDS

Staking is a way to reward our community members for having a long-term mindset and protecting their cryptoassets from speculation. By staking your tokens, you will be able to earn ET COIN rewards when you lock them through our interface.

Going forward, staking ET COIN will give you a vote and say in the use of the Community Treasury, soon to hit \$1 million in value.

The interests will be paid in ET COIN and the initial APY (Annual Percentage Yield) will be around 22%, rate that will make the investment very attractive for future users. Compound interest will be considered automatically so the user will generate better returns by saving time between transactions.

We will also put into play incentive programs for stakeholders to add value to ET COIN WEB3.

In the further future, our community may update our staking system with more interesting annual percentage yields to give better rewards to those who have added measurable value to our ecosystem. There is still much research and experimentation to be done on this aspect of governance.

Finally, stakeholders who are not players or are not interested in participating in governance could delegate their voting rights to other parties.

TECHNICAL DATA

Official Website: <https://etcoinweb3.com>

Contract Address: 0x0ee5965865dd00ac48751b969a95bd8396f69db2
